Yucca Mountain

1 [Nuclear waste is obviously a huge problem today. We definitely need somewhere
to put this waste. Until we find a better substitution for getting rid of this waste, this
seems to be the best option because of its low populated area, the country's highest
2 terrestrial radiation, and there is a lot of room to work with.]
3 [There are downsides to this project. One is that we'll have to ship the waste
through largely populated areas, such as Chicago.] [Another downside is that all the waste
is in one single area and if something goes wrong, everything there will be ruined and the
people there could be hurt.] One more downside is that it takes up a large track of land.
But until we think of something better, I believe that the benefits outweigh the risk.
